Medical Computerized Scribe Information

Details

I am now using a new computerized Medical Scribe to help complete notes from your visit. The computer monitors our conversations and converts the speech to text to be saved in your chart. This system captures more details and is more accurate than the previous method I was using. It does not make any decisions regarding your care –it only records what we discussed during the visit.

Benefits

- Increased efficiency in medical record documentation.
- Enhanced accuracy in transcribing verbal information.
- more details are captured during the visit

Risks

- Possibility of errors in transcription
- Potential limitations in recognizing certain accents or speech patterns.

SECURITY MEASURES: The medical practice employs robust security measures to safeguard the confidentiality and integrity of the information processed through the dictation. These measures include encryption, access controls, and regular security audits to prevent unauthorized access and protect against data breaches.
